

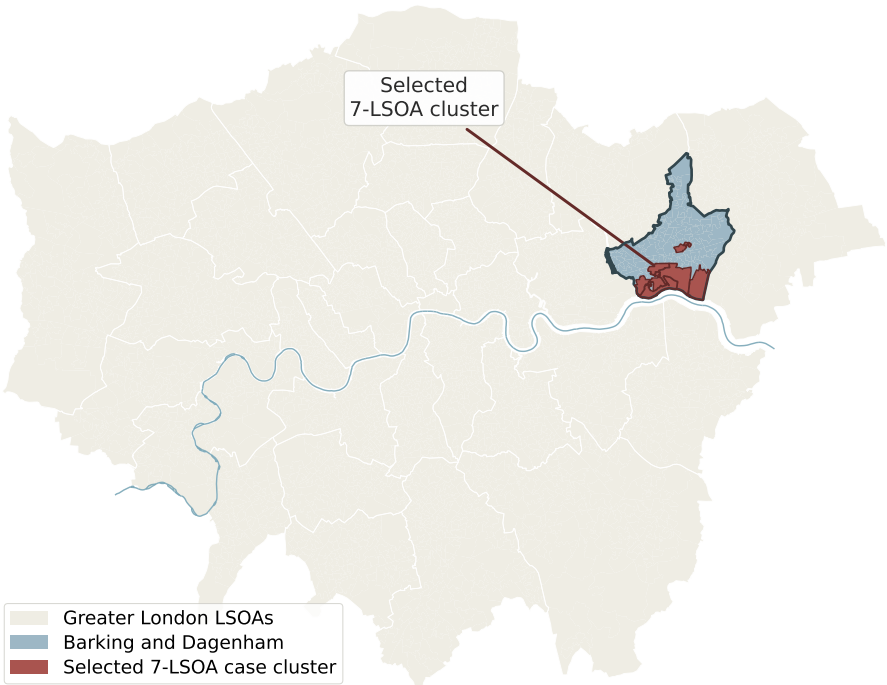

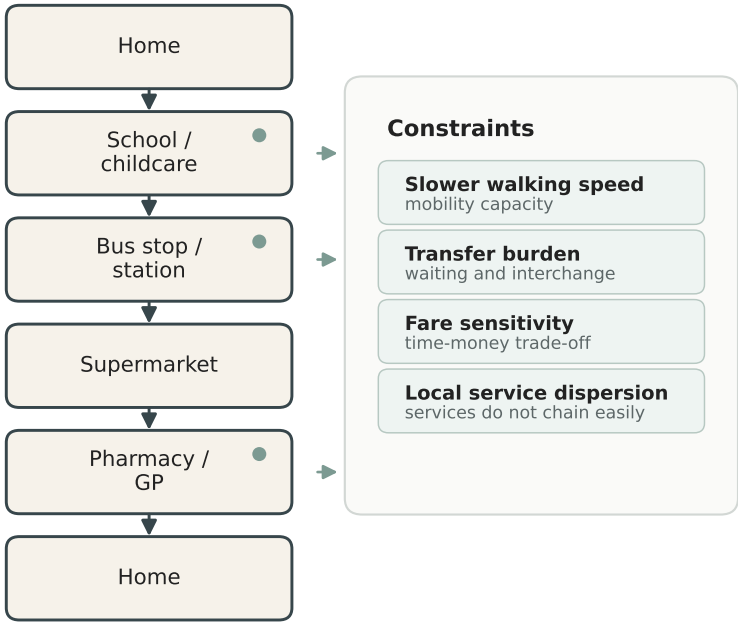

Figure 12A-B. Regional connectivity does not automatically resolve local care-chain mismatch

Barking Riverside-Thames View-Goresbrook is a diagnostic case where household demand, low walking access and care-chain constraints intersect.

A. Case location: an Outer London high-mismatch cluster

B. Care-chain logic: access depends on combining services

Interpretation: the case is not about isolated proximity, but whether services can be combined in a daily care routine.
