

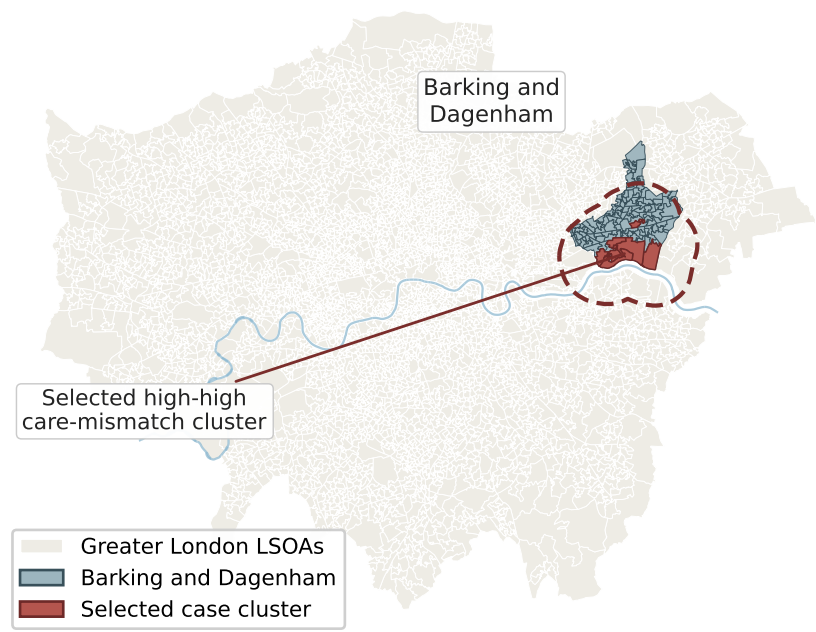

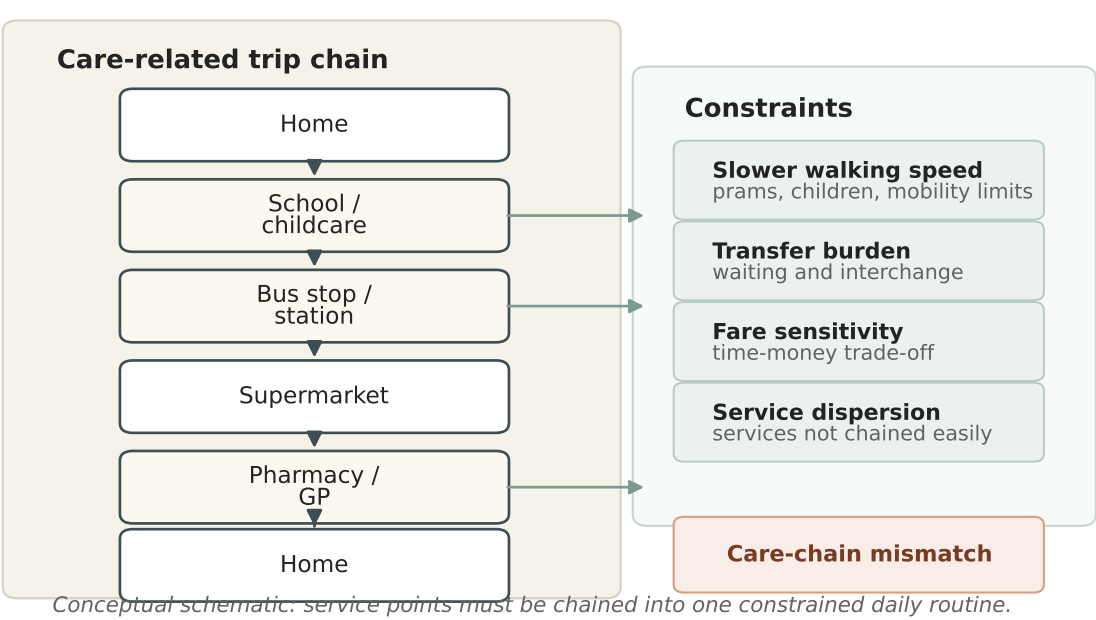

Figure 12. Regional connectivity and local care-chain mismatch

Barking Riverside-Thames View-Goresbrook: location, local everyday services and care-related trip-chain logic.

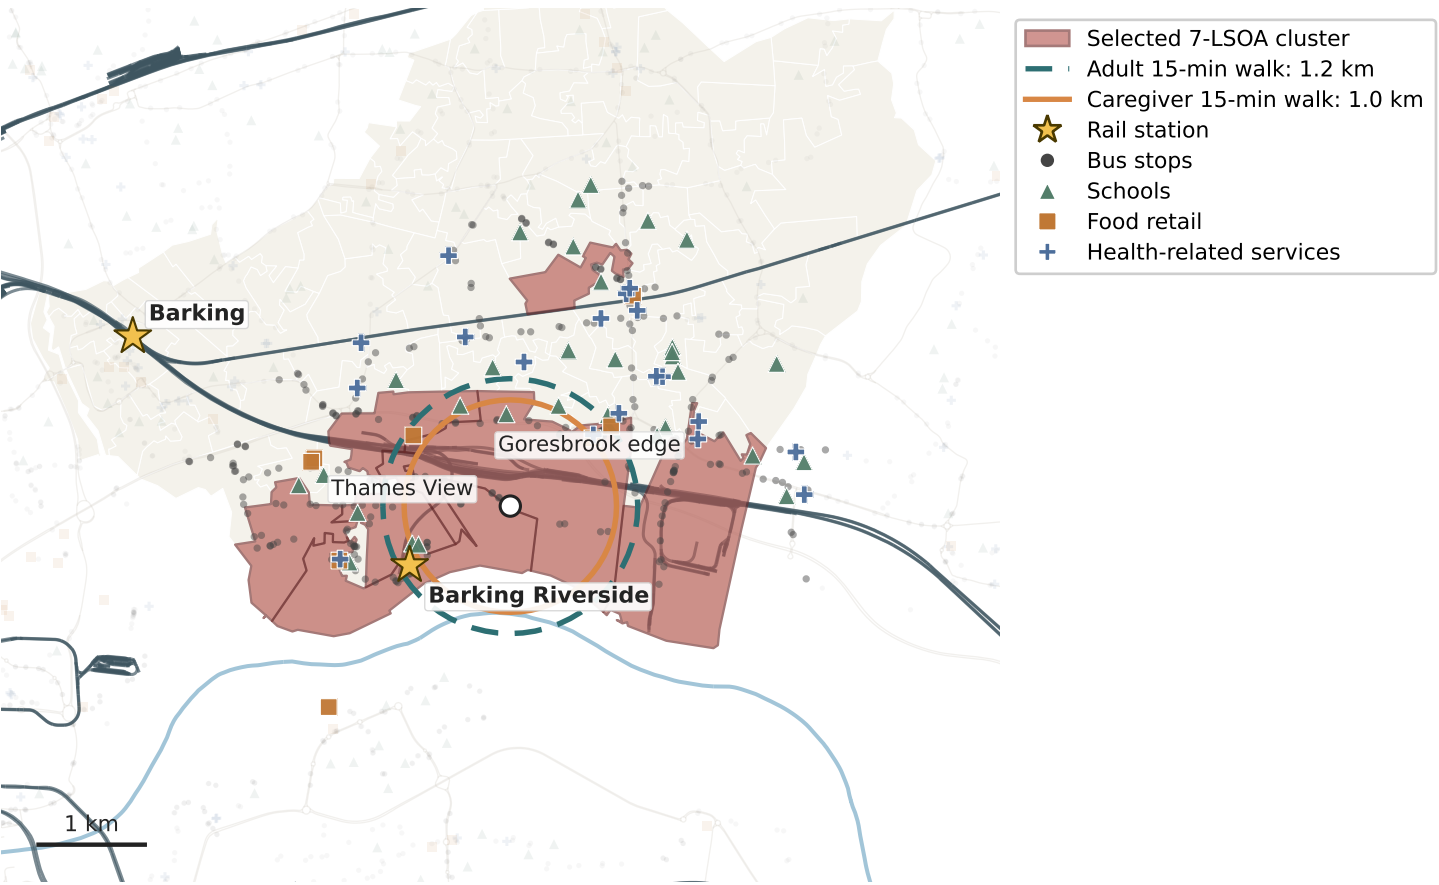

A. Location of the selected case within London

C. Care-chain accessibility logic, not single-destination proximity

B. Slower caregiver walking assumptions reduce the usable everyday service environment

Note: walking catchments are illustrative straight-line equivalents from the case-cluster centroid; they visualise speed-sensitivity logic rather than route-level isochrones.
