

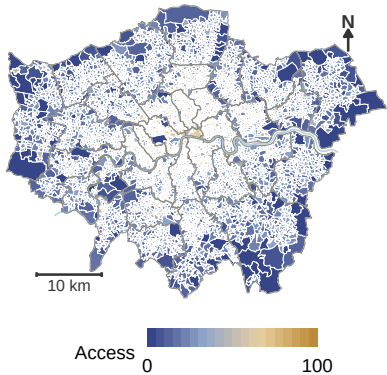

Figure 7A–D. Why Caregiving Adults Are Not Generic Adults

A four-panel evidence set for RQ3: baseline access, need-access mismatch, care-related demand proxy and spatial clustering.

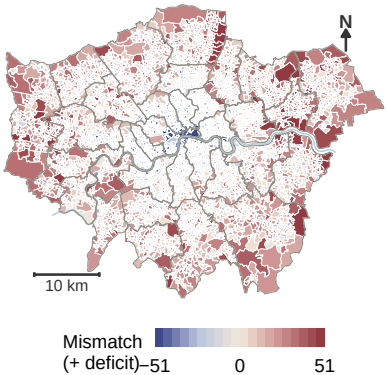

A. Accessibility baseline

Reachable caregiving service basket

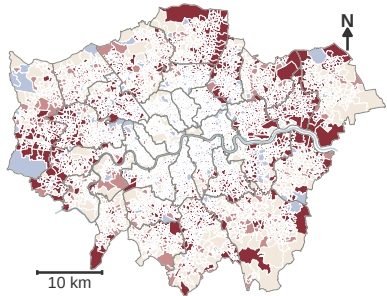

B. Need-access mismatch

Where care need exceeds modelled access

C. Vulnerability typology

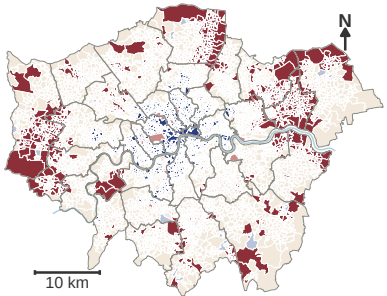

Care-related demand proxy and deprivation context

Low care + less deprived Low care + more deprived High care + less deprived
High care + more deprived NA

D. Spatial clusters

High-high mismatch clusters test spatial concentration

High-high deficit Low-low surplus High-low outlier
Low-high outlier Not significant

Interpretation: RQ3 is answered by showing where the caregiving-oriented demand proxy exceeds modelled access, and whether those deficits cluster spatially.
